

# CURRICULUM GUIDE – CAREER EDUCATION

## GOALS AND GENERAL OBJECTIVES

### GOALS

**The major goals of the Career Education Curriculum are:**

1. Developing self awareness
2. Fostering career awareness in students.
3. Guiding students in career exploration.
4. Assisting students in career preparation.

These goals recognise and reflect the stages of career development which are: Awareness, Exploration and Preparation.

### GENERAL OBJECTIVES

#### Grade 7

In order to foster self awareness, the curriculum is designed to assist students to:

- discover and clarify their individual aptitudes, interest and aspirations;
- link their individual interests and aspirations to career options;
- link their performance in other subjects to their career options.

#### Grade 8

In order to provide guidance in career exploration, the curriculum is designed to assist students in:

- the development of their abilities, gaining knowledge to analyze and evaluate themselves and their relationships with others;
- gaining knowledge and understanding of entry requirements for careers of interest to them;
- investigating the day to day activities, rewards, disadvantages and advantages related to career options;
- matching career planning to other life goals.

## Grade 9

To facilitate career preparation the curriculum is designed to assist students to:

- continuing to investigate the process of self-evaluation and relationship building;
- developing skills in accessing processing and using career information;
- acquiring appropriate knowledge, general skills and attitudes for the world of work;
- developing job search skills.

## CAREER EDUCATION ACROSS THE CURRICULUM

Career development is a life-long process which begins in the home, is nurtured throughout school life and is manifested in adult career choices.

In order to achieve the goal of career education across the curriculum, the curricula for Grades Seven to Nine are written in successive stages and scope and sequence.

Individuals progress through three stages of career development: Awareness, Exploration, Preparation :

Grade 7

Awareness begins with self and career awareness-

Grade 8

Exploration engages youngsters in activities to explore their own interests, abilities and values as well as to explore potential careers and opportunities-(

Grade 9

Preparation builds upon the experiences and learning as the individual prepares to make meaningful and satisfying career choices-.

It is the responsibility of educators to guide this process by providing appropriate support and experiences to assist students through all stages. In particular, educators should:

- (i) expose all students to, and encourage them to explore non-traditional careers regardless of sex, race or ethnic background;
- (ii) help students develop positive attitudes towards work;
- (iii) prepare students for careers that are realistic and satisfying to them.

Career education is not a subject. It must:

1. Be the link that joins career academic learning with the world of work.

2. Be the tool that prepares students to make realistic career decisions as they acquire new experiences, values and goals.
3. Be based on students' needs.
4. Employ a team approach to teaching and learning.
5. Include the infusion of Career Education elements into the entire curriculum.
6. Address the needs of society as part of students' preparation to be responsible citizens.

The process of infusion involves:

1. A the recognition/identification of the many Career Education concepts that are similar to those in other subjects areas;
2. The purposeful linking of the common concepts and /or areas of content identified at (a) so that they are not taught in isolation. Rather, there should be such constant cross-referencing amongst subjects that students perceive the common concepts as comprising necessary insights and information without which their education would be incomplete;
3. the use of methodologies and activities which ensure the development of skills and attitudes which appear in all subject areas in ways that demonstrate the relevance of these learnings and experiences to career choices.

The management of the process is important. Leadership must come from the Guidance Counsellor and /or Career Education Coordinator, but all staff members need to familiarize themselves with the main objectives of the Career Education Programme and to plan together for its effective implementation. The inclusion of career education information is very critical to the growth and development of the students. It is therefore imperative that it be explicit in lesson planning and delivery with an emphasis from the Grade Seven (7) level.

## **Methodologies/Strategies for Implementing Career Education**

For the most effective delivery of career education, it is necessary to use a combination of simple strategies which will not burden the classroom teacher or the guidance counsellor.

The main strategies are outlined below.

1. Infusion

The major delivery system is the infusion process by which the career education concepts are introduced and reinforced in the entire school curriculum thereby becoming an

integral part of all its programmes – academic, practical, aesthetic. When efficiently used by classroom teachers, the infusion strategy strengthens and facilitates academic concepts and skills.

2. Career Counselling

Career counsellors will engage in progressive, counselling through the Career Awareness, Exploration and Preparation stages. In time specially allocated to counselling, students must be engaged in activities leading to specific career education outcomes, by the time they reach the preparation stage.

3. Other Strategies

There are many programmes, projects and activities which when properly planned and implemented should provide for students of all ages, the values and qualities of a productive career education experience. Among there are:

(a) The use of Homeroom/Form/Classroom Time

1. For the exploration of those aspects of the education of the adolescent which are not directly addressed through the formal curriculum, but which are important for the students' overall development.

(b) Mini Projects/Mini – Business (in –school or community based)

1. providing opportunity for planning, working together, sharing responsibilities, developing initiative and practising accountability.

(c) Exploration of the Environment

Encouraging students to explore the areas in which they live and/or attend school, and to develop an appreciation and understanding of the variety of physical and socio-economic conditions existing around them.

(d) Work Experience

1. Work experience opportunities, especially at the Career Preparation Stage provide exposure to the demands, responsibilities, rewards, and challenges of the world of work

(e) Intergenerational Programmes

These provide opportunities for students to interact with senior citizens in the community regarding their life and work, to learn from them, to facilitate their becoming extended families of the school community.

In implementing these main strategies, a number of techniques and approaches which have proven successful in other contexts may be applied. These include:

- using films to provide information on careers and to reinforce appropriate behaviours for the work world.
- bringing resource persons into the classroom to help broaden students' exposure to role models, increase career information, and to motivate students to set education/career life goals.
- analysing jobs in terms of the skills, duties and tasks required of workers to clarify

what workers actually do on the job and to help dispel inaccurate career information

These and other strategies and approaches are expanded and elaborated on in the Teachers' Guide
